

FGTZ-230V

Wireless garage door adapter. 100 x 55 x 45 mm (measurements without plug), pure white. With potential-free switching contact output for a maximum of 30 V/1 A. Encrypted wireless, bidirectional wireless and repeater function are switchable. Standby loss only 0,8 watt.

Adapter for German fused safety sockets. With increased shock protection.
The schuko socket (16 A) is directly connected to the schuko plug, so no mains socket is blocked and the mains plug of the garage door drive can be plugged in directly here. In order to control the garage door drive with additional wireless buttons, its connection terminals for an external, potential-free button (contact) are connected to the plug-in screw terminals of the potential-free switch contact output of the actuator.
Only safety extra-low voltage (SELV) may be switched!
With the convenient tapping technique, up to 24 wireless universal buttons and wireless direction buttons can be taught-in. In order for the radio direction switch to function as such, a radio window/door contact must also be taught-in. This reports whether the garage door is open or closed.

FGTZ-230V	Wireless garage door adapter	**Art. No. 30000379**	**94,23 €/pc.**
