

JD95

Blinds display. Device: 95 x 74 mm, display: 70 x 50 mm.

The blinds display makes it possible to show the current position of the blinds and the slats both when the device is not in use and when it is in operation. It is therefore ideal for visualising a blinds control, e.g. via an actuator for shading elements.
The time for raising and lowering is **32 seconds.**
Pressing the **'Reset' button** on the back of the device resets the display.
The power supply is via the included **micro-USB cable.**
Control voltage: **120-240V AC** via the **Up** and **Down** inputs.
